You can remove this person and you can adjust the background or even remove it altogether. You can do this through the Background Eraser tool in Photoshop. Just find the area that has the background image and click on it. Photoshop will then remove the background from the photo. Q: Passing objects in JS functions I am designing a program in which a user enters a name in the GUI and then is taken to a page on the server side where the user image is retrieved. I have stored the user image in an object, and in another object I am storing the data of the users username and the name of the person's image. What I want to do is save the user's name in a var that is already defined, and then the program will pass that name on to the server side where the user's image is saved. Here is an example of what I'm talking about: `var userName = $.trim(getName()); var userImage = $.trim(getImageData()); $.ajax({ type: "GET", url: "URL_TO_SERVER_FUNCTION", data: { name: userName, image: userImage }, success: function (data) { //If the user image is successfully retrieved from the server //Show the user's image on the page } });` One of my problems is that when I use \$.ajax it seems like everything is passed as a variable. And I can't use the var userName to pass it to the server without it losing its value. How can I go about doing this? Thanks, Tom A: To be safe you can do something like this: `var userName, userImage; $.ajax({ type: "GET", url: "URL_TO_SERVER_FUNCTION",`

is of an aperture S4 connected to the support springs S10 and having openings. The spring ends S4 support the wheels S5 and S6. During use, the metal wire S3 and the metal base B11 are forced to scrape the adhesive solidifying the glue by destroying the glass layer, this being observed by the naked eye. The main disadvantage of this known device is the fact that the metal wire S3 is susceptible to being scratched and then lose its effectiveness, or even break. This is why, it is imperative to adhere the wire S3 onto the base, on the side where it is attached to the door, by adhesive and then leave there. This adhesion must be checked on a regular basis, or else this part of the support will deteriorate. Moreover, the adhesive itself can become unclean, especially if the device is used in environments with a high temperature, for example, inside of a vehicle. Boomers have been brewing up some of the best TV shows in recent years. The Walking Dead blew away the competition, and Stranger Things landed a second season, and it's just beginning. The nostalgia of returning to a simpler time looms large, and it fuels the strengths of these shows. With nostalgia comes comfort, and the return to simpler times offers comfort for those of us that had some bad times in our childhood. There's no question that's a great part of nostalgia, the cheap version of wanting the easy life again for those of us who had some rough times growing up. But what if the setting wasn't ideal? What if it didn't represent success or set up for success in the long run? Enter American Dad. Much like the first season, American Dad: The Animated Series is a show that's all about nostalgia, but within the context of a fictionalized version of modern life. But with Stan Smithson in the role of CEO, and giving more to his family, the kids are in a new, successful school, the Christmas special is airing in on Thanksgiving day, and it looks like the Smithsons are having a good run. The only thing missing is the nostalgia, and that's the clue to how American Dad will end. The Fall Of Family Entertainment With the end of the golden age of home entertainment, there's no question that the world of family entertainment has changed. The rise of the streaming market has changed the world of entertainment as a whole, and the Netflix effect has started to change the biggest television networks as well
