Main article: AutoCAD AutoCAD is a commercial computer-aided design (CAD) and drafting software application. Developed and marketed by Autodesk, AutoCAD was first released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is also available as mobile and web apps. AutoCAD is the most used computer-aided design (CAD) software in the world, with a market share of about 30-50% of the market in 2017.[1][2] It is also the most used CAD software in Asia and the second most used in North America, after Dassault Systemes' Creo.[1] AutoCAD has the following key capabilities: Document and Sheet Management Document and sheet management include user interface elements that allow users to create, view, manipulate, and save drawings and sheets. Drafting A drafting toolkit allows users to create 2D and 3D drawings of objects in the real world, whether from paper plans, computer files, or real-time points, lines, or rays captured from an input device. Design AutoCAD can connect to other Autodesk software and include a set of functions to design and build mechanical, architectural, and structural designs. Features The following lists include features found in AutoCAD releases and Autodesk's website. Many are commonly used, while some are more advanced. 2014 AutoCAD's features in a nutshell. Start the game and run the tool. Open the serial number file and make sure to have the same serial number as found in game. Click "Create Key" Copy the key and paste it into Autocad. Select new key and paste in the selected key. Click "Save Key" Repeat for each key. And that's it. You'll have to do it once for every new batch of keys and remember that if you create too many keys, you might lose the last one for your account. A: I had the same issue but found the answer in Autodesk forum which I'll copy here for anyone who is interested. KeyGen tool does not provide any support for batch generation of keys. If you have more than a single user / license, you will need to generate multiple keys for each of them. The option to generate multiple keys is only available for users that have purchased the on-premise version of AutoCAD for the first time. If you do not have on-premise version of AutoCAD, then this option is not available. I've generated the serial keys from the command line and it works. I'm doing the following: cd /Path/to/install/autocad/installer/mac autocad_installer_build_tools_3.8.2_2014.2/Installer/build_tools_3.8.2_2014.2.app/Contents/MacOS/AutocadInstaller/Build/InstallKey.sh -a serial the InstallKey.sh script provides the following: creates a dictionary creates a file containing keys A: It is not really possible to do in a batch, as the serial numbers of those keys have to be unique. AutoCAD comes with a nice tool which allows you to make license keys. Here's how it works: Make sure you have installed the Advanced Trial version. Open up your Autodesk License Manager and click the Options icon in the upper-left corner. In the License Manager window that appears, click the License Settings tab. The license settings window displays all of your licenses. Click the Serial Number tab to view the serial numbers of your licenses. To generate a new license key, click the
