Q: Font sizes in HTML5's h3 and h4 tags I can not understand why the font sizes for h3 and h4 are different from the rest of the text on the page. In this example the "HERE" is hidden (screen reader) yet it has a different size from "Title" and "Content". See the example: A: Because the style of the parent container: is different from the default style set for and HERE Title Content With media queries you can set a different style for and even with the default style set for their parent container. Last night, Queens rapper Joey Badass and his new band, Joey Badass & the Mood Tha Harris, held their first performance together in NYC since they released the new album, Brotherhood, back in February. The show came at the end of a weeklong tour promoting the album, and the Brooklyn rapper sounded fantastic. You can check out Joey Badass & the Mood Tha Harris performing "World Wide" at the Brooklyn Steel here. Dope kicks on the tour's first night, as Joey Badass takes the stage and the Mood Tha Harris soon follow. Both Joey Badass & the Mood Tha Harris were on the road separately before the Brooklyn rapper reunited the two. Last night's first show of the tour had to be cut short as both Joey Badass & the Mood Tha Harris were robbed last night and shot in the face with a gun shot to the mouth and nose. Joey Badass and his band mate were treated for the injuries and they aren't seriously hurt. The two performers and the group's driver were robbed after the show and taken at gunpoint to an unknown address. A would-be robber reportedly opened fire on the trio after jumping out of a getaway car. No one was injured when police responded and found two shell casings in

What's New In?

The present invention relates to digital data processing, and more specifically to a method of loading programs into a compact disk (CD) player. A CD is typically sold with one or more pre-written CD programs that enable a user to listen to music on the CD as the CD program is being loaded into the CD player. It is desirable to load programs into CD players as quickly as possible, and the prior art CD player programs are often very time consuming. One prior art program has a user enter a 1 to 4 digit CD player code and then press a xe2x80x9cPlayxe2x80x9d button. When the correct CD player code is entered, a list of CD programs at the user's choice is displayed. The user then selects a CD program and presses the xe2x80x9cPlayxe2x80x9d button. This prior art CD player program works well if only a few CD programs are available, and many people never try to use this program because they are not familiar with it. Furthermore, if a user happens to be using an incorrect CD player code, the user has to restart the program before being given a list of CD programs. The present invention is a CD player program that allows a user to efficiently load a list of CD programs from the CD, and then play them simultaneously by entering a 1 to 15 digit CD player code. This allows a user to use a prior art CD player program, or to try to use the CD player program to select CD programs from the CD. If a user enters a CD player code into the CD player program that is incorrect, the system will play all of the CD programs from the CD, but will also display the valid CD player codes, so that the user can try to use the CD player program to select CD programs from the CD.Q: How to scroll through multiple UIPageViewController pages and change orientation? I'm working on an app that uses UIPageViewController and wants to go back and forth through views, but unlike the tutorial in the apple documentation I'm not able to do so.

The pageViewController array is not controlled by the parent view controller, and it isn't specified that I pass through it. I've tried creating a simple project with the same structure and it works, also the pages are visible as expected, but I just can't scroll to them. I use the code below to init the UIPageViewController and
