How to update firmware of Dvd Writer- Asus DRW-1814BL. .Q: How to port locally generated libgsoap code to.net Compact Framework? I'm trying to port a few changes I need to do to libgsoap to the.net Compact Framework. I am really struggling, and can't find any solid info on how to. I want to change a couple of definitions, such as UserDataMember (which is a default one created by libgsoap, I need to remove it). The only information on how to do that in the Compact Framework I found was given by Microsoft itself: Also make sure you modify the Serialization informatin the Marshal Subclass() instead of subclassing TUserDataMember. First, I think this is wrong approach. Why should I modify all generated classes from gsoap? I don't know of any way to only serialize one field in an object. If the definition is changed, that definition is changed everywhere in the code using the type. If you modify the header of an API DLL it is a one time operation if you don't manually rebuild. Instead, what I've done for the past is create a new project from scratch using the exact same source as the original. Then, I edited the original project to use the new one instead of the
