2. Adobe produces the Creative Suite that offers a suite of applications, including Photoshop, Lightroom, and the latest version of its Adobe InDesign software.

History Of Photoshop Photoshop was originally designed by two brothers, Thomas and John Knoll, for their company, “The Image Computer”, where they were designing graphics for personal computers. Most of the coding for the Photoshop image editing software was programmed in the 1982 in Pascal by the two brothers and other developers who worked with them. The name Photoshop came from the phrase “photostat”, a generic term used for a printed copy of an electronic document. The first version of the Photoshop software, Photoshop Basic, was released in 1987. It was a multi-tasking image editing software which could also be used to design web pages. It had to be purchased separately from the Adobe graphics suite, and was initially sold for \$500. By 1994, the average price for the most popular version of the software was between \$300 and \$500. With the release of the program in 1994, the software became a graphical image editing program and a web design program, which also included page layout and web design tools. It was now the first image editing program that could edit pictures for websites and was used by businesses to design and create images. In 1998 Adobe changed the name of Photoshop to Adobe Photoshop and the software was made available free of charge. There was a move to make the software more interactive and to make it available to the public. They also removed the limitations of the software to use images for only web design. In 2000 the first Photoshop CS was released as an upgrade to the software. This version allowed people to create professional quality images for the web. It also allowed users to create more complex projects. The CS1 version of Photoshop cost \$300 and the CS2 had a price of around \$1,500. By 2003, the software had to be purchased separately from the Adobe web products. The new features of Photoshop included the ability to use it as a non-destructive editing software. The software could be used to make changes to an image before printing or as a non-destructive photo editor. This meant that the photo editing software could be used to make changes to an image and then printed or shared without losing those changes. In 2004 Photoshop Lightroom, a new version of the software with improved functionality and developed by Adobe, was released. This software allowed users to edit their images and create albums of their images. It also allowed users to backup and organize their images. In 2010 the name of the software was changed to Photoshop Elements, 05a79cecff
