**# API** **## Implementation details** See the source code in ``api/index.js`` to learn how the actual implementation works. **## Core concepts** We used [lodash]( as the basis of our API implementation. We use the `_fat arrow function_` (bound functions) from JavaScript, but not as `_required_`, so if you prefer the old way, you can continue using it. **## Some features not implemented yet** The implementation can be extended easily using the ``extend`` method of the ``Api`` object (this

---

is optional, but highly recommended): ``js  
var api = new Api(); // The `extend` method  
accepts an array of extended objects:  
api.extend([ {method: 'foo'}, {method: 'bar'}  
]); // The above extension can be used by the  
`API` method: api.foo(); // this method is not  
implemented yet. `` ## License See  
`LICENSE` file for the actual license under  
which this software is released. Ask HN:  
What is the single most useful piece of  
software you use in your daily life? - baran I  
am wondering about the software tools and/or  
processes that are best used to get things done

---

in my daily life (as in, other than my usual Operating System). The question is in regards to computers, but I am curious about any things that people use their computers for that are not strictly limited to operating the computer... i.e. a process to review emails, to find a job, to prepare a presentation. What are your most useful applications or tools?

===== DanielStraight This isn't exactly what you asked for but here's what I use most: ----- johnrob For me, Mail.app is like an operating system - it gives me everything I need without cluttering up the rest of the

---

desktop. Everything else should be an extension of that, otherwise it's a distraction.
