3D modeling 3D modeling in AutoCAD began with version 2.5 in 1996. Until then, only 2D drawing objects were drawn in 3D space, while commands available for 2D drawings did not work for 3D drawings, so they were considered as 2D drawings. The first version of 3D drawing allowed for 3D objects to be placed in space in AutoCAD using a tracking cloud, or a line-of-sight interface. This was a new technology that allowed for the user to see 3D objects in AutoCAD and interact with them without having to manipulate the object as a 2D drawing in space. The cloud interface was more natural and useful for 3D modeling. AutoCAD was able to interpret the commands of the 2D interface, and so commands in the interface were updated to work for 3D objects. The 2.5 release of AutoCAD also included the first 3D modeling tools available, and the first basic 3D modeling tools were built in. Later, the 2.5 release introduced the 3D design environment, which was a feature that allowed a user to create a 3D model. This was before the 3D model was sent to the manufacturer. The design environment was created because CAD users often have a desire to create a prototype of a drawing or part to test out ideas. The design environment also made it possible for a user to create a 3D model using a 2D interface, then later send the 3D model to a manufacturer. The first version of the design environment included a simple modeling tool. The editing and history features were advanced enough to allow a user to create 3D models. This version of the design environment was an internal prototype in the lab, and was released to a limited group of users in February 1998. The design environment featured a cloud of lines that represented the 3D object being drawn. Users could manipulate the 3D objects by "flying" them in the model space and placing them in the space. The model space was "grid-based", so the objects could be placed by specific measurement units, which were easier for users to work with. As the model was "placed", the 3D objects appeared in space. With the first release of 3D design, users could also change the color of 3D objects, but could not change their style, for example, make the 3D object look like a part. The first official release of 3D design was in March 1998. The design ca3bfb1094
