I downloaded this game, it was in a seperate folder (gametem) so it's not suppose to mess up my ps3 games. After I deleted this and tried to play (doesn't matter what cheat i use) i have 0 games. So I formated the gametem and reinstalled the game and it worked like new. I cant install the patch through the PS3 home menu because I cant activate my ps3 in home server mode. If anybody has any ideas please reply! And yeah, I put it in fast auto! But its still lag because I am using a ps2 mouse and keyboard. Yes, I have read your other reviews and do not want the lag. Thats why I bought this game. I have no intention on contacting EA. I just want to play the game with lag free. borkaz wrote:Hi MrGonzo, Thank you for answering! Once you have installed Windows Vista service pack 2 and DirectX 10, you will be able to install software that supports Direct X 10.0. However, this doesn't mean that you need to run the game on Direct X 10.0. In case you want to run the game on Direct X 10.0, you can still do so. Windows XP, Vista, Vista Service Pack 1, Windows 7 (32-bit or 64-bit), Windows 7 Service Pack 1 (32-bit or 64-bit), or Windows 8 (32-bit or 64-bit) operating systems (both 32-bit and 64-bit). These operating systems will all work with DirectX 10. Because DirectX 10 builds on the current DirectX 9 technology, you can run the most up-to-date games and applications. After completing the installation, you will be taken to the DirectX installation wizard that lets you download and install add-ons. After you have downloaded the add-ons, you can choose to install them. The download menu list is broken down into three sections: Note that there is a difference between the 32-bit and 64-bit versions of DirectX.

In order to find out which version of DirectX you have, go to www.microsoft.com/en-us/download/details.aspx?id=50594&displaylang=en. If you are using a 64-bit version of Windows, then you will need to download the 64-bit DirectX version. This program only comes to look at the first two resolutions. It doesn't work that way for me. I have installed both of them and running video drivers. It only gives me a black screen when I go to change the resolution. I have an Nvidia graphics card. So it has DirectX 9 and not Direct X 10. It won't let me get around this, no matter how I try. It comes up when I first go to run it as a program. It shows red at the bottom and then gets black when I go to change the resolution. 5ec8ef588b
