I hesitate to make bold claims on how cool Adobe Photoshop is going to be, since it will probably be limited to the Mac platform. The latest demo did make me happy, though, as I was able to edit and apply the new set of AI filters, which are called “neural style” or “neural art”. There is a “Photo” submenu, too, which is where you will go to create layered files and edit raw or jpeg files. Looks amazing, I’ll admit. Virtually all of the newer features of the 21st edition of Adobe Photoshop are being overlaid with the Photoshop Elements experience. And while the older apps can still function, they will become harder to use as the time passes. For instance, I haven’t been able to make the Built-in Adjustments panel work in either version. (In this case, “Built-in Adjustments” is the term used by Adobe to refer to the Smart Fix and Lens Corrections features that used to be included as part of the full-featured Photoshop program. I still can’t get those to work in Elements, either.) The Map tool simply doesn’t work at all in Elements, which is surprising since the new 2019 edition of Photoshop still includes a map layer - the Layer option is grayed-out. You can select “Vector layer” in the options, but it doesn’t provide a button to convert the layer to a vector format. Based on the version of Elements that is bundled with Photoshop, Elements is a good photo editor. However, if you have a link to either the “Desktop” or “Mobile” versions of the program, you will be able to edit and save most of your edits in that app, too. In my experience, the same photo, retouched and saved in both apps, will end up with identical look and feel, but any edits made in Elements won’t carry over to the “Mobile” version. On the other hand, any edits made in the mobile app will carry over to the “Desktop” version.
