Lightroom CC 2018 has been available for less than one year, and it's already available for both Mac and Windows. It brings a mixture of already popular features and brand new ones that are simple and intuitive to use. In order to explain the new features in detail, I will first review the six major ones, then go over the new utility-grade features, the tools that have not yet received a major upgrade in the toolkit, and finally give an overall impression of the Lightroom CC 2018. That way, you will have more of an overview to place the new New Features in Lightroom CC 2018. By the way, I'm not listing all the features that the Lightroom CC 2018 contains, only the ones that are the most interesting to me. At the end, I will talk briefly about what is still missing. Selecting an image in the Library or Grid will open a currently selected image in a new window, which makes for easier view and change of the active image. To close the side panel, just click the white button at the right top side. One of the great things that have been incorporated into the new Lightroom CC is that the thumbnail is shown as soon as you open the Grid. It makes it much easier to find the the images you want to work on, especially if you use the new column view feature . In column view, the Grid and the thumbnail will always be to the side. In the recent version of Lightroom, you can flip rows and columns using the buttons that have their position. By flipping the thumbnails, you can make the Grid listing easier to use if the next item that is opened is not what you were looking for.
