When performing the Import process, Lightroom 5 still extracts EXIF data and does so as the first thing it does, regardless of whether I import from disk or a USB stick. This can be a bit annoying when you're working on a batch of images at once. You're then forced to wait a few minutes until Lightroom 5 does its thing. Thankfully, the preview pane now shows a message to indicate that the processing is underway. That may seem a bit unintuitive. Why tell me that the process is underway? Would it not be better to tell me it's finished? What if the process takes a long time? It turns out that older versions of Lightroom always showed me that sort of message. The newer version does not. I think that's just fine. If Lightroom 5 claims to be faster, it should be a bit faster to tell me it's finished. The one area in which Lightroom 5 offers more shows itself when you start working on a batch of photos. You see the current state of the images as they are being imported. You press a button, the images complete import and then the Thumbnails panel become populated with thumbnail images of the new files. The progress bar showing image import/export speeds ticks up until the images are all done. There are dozens of new features in Lightroom 5. Let's go over the software's main features. This review should leave you with a clear understanding of how you can use Lightroom 5 to turn your photos into something really awesome. Quickly bypass any selected files to the next step in the Import workflow by pressing "N" a few times. Press "N" again to bypass the current selection. You can do this after a file has been imported, too. For example, you can jump right from Importing to Developing.
